The Status of Claims

Claims 1-18 are pending.

Claims 1-18 are rejected.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 , the term " substantially " is recited. This expression is vague and indefinite because the specification does elaborate what is meant by the term " substantially ." Therefore, an appropriate correction is required.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11

F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 and 13-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of copending Application No. 10/808,282. Although the conflicting claims are not identical, they are not patentably distinct from each other because they are related to the genus and the species relationship.

The claimed invention is directed to a process for partially oxidizing propene to acrylic acid in the gas phase under heterogeneous catalysis by conducting a starting gas mixture containing oxygen and inert gas in a molar $O_2 : C_3H_6$ ratio of > 1 , whereas the Application No. 10/808,282 case has the similar description as in the claim 1 of the claimed invention except that the prior art has the labels for mixtures 1 and 2 and the fixed beds 1 and 2 and a molar $O_2 : C_3H_6$ ratio of > 0.5 .

Even so, such description regarding the molar $O_2 : C_3H_6$ ratio > 1 , the specification does describe in the passage (see page 1, line 6) and for the labels for gas mixtures 1 and 2 and the fixed beds 1 and 2, it would have been obvious to the skilled artisan in art to be motivated to describe generally the claimed invention without

dividing them since the main invention is to use the gas mixtures and the fixed bed during the invention.

Therefore, it would have been obvious to the skilled artisan in art to be motivated to emphasize the general concept of the invention by removing the labels for gas mixtures 1 and 2 and the fixed beds. This is because the skilled artisan in the art would expect such a modification to be feasible.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
